

The simple and affordable 'Snap3D' case and the perfect 'Mplayer3D' application behave like a 3D engine and turn your mobile into a 3D theater.

MOPIC is a spin-off of Samsung Electronics in November, 2015.

We began developing our glasses-free 3D technology while working at Samsung Electronics in 2011. Since the establishment of MOPIC, it has been refined to become more complete and advanced technology.

Pair 'Snap3D' with 'Mplayer3D'. You can see amazing and spectacular 3D images on your smartphone or tablet.

Delivering incomparable convenience and perfect cinema quality 3D, Mopic offers the first solution using a smart 3D cover for mobile devices and a player with point-of-view and real-time rendering technology.

The important value we embrace is that we can safely watch great 3D images anytime, anywhere.

Our vision is that everyone can enjoy the pleasure to watch 3D easily and fairly.

People always have smartphones or tablets, but there was no proper way to apply 3D technology to the existing mobiles to watch 3D. That's why Mopic was born. "3D for everyone!"
