

The simple and affordable 'Snap3D' case and the perfect 'Mplayer3D' application turn your mobile into a 3D theater.

MOPIC is a spin-off of Samsung Electronics in November, 2015.

We began developing our glasses-free 3D technology at Samsung Electronics in 2011.

Since the establishment of MOPIC, it has been refined to become more complete and advanced technology.

Install Snap3D on the smartphone and download Mplayer3D application, the 3D engine, you can enjoy high-quality 3D that you have never experienced before. The inner surface of Snap3D is precisely engineered with a 3D screen. This smart device will be a 3D viewer when it is put on the front screen and it will be a protective case when it is put on the back. Mplayer3D transforms the smartphone into a high-end stereoscopic device with user's viewpoint tracking and real-time rendering technology.

The important value we embrace is that we can safely watch great 3D images anytime, anywhere.

Our vision is that everyone can enjoy the pleasure to watch 3D easily and fairly.

People always have smartphones or tablets, but there was no proper way to apply 3D technology to the existing mobiles to watch 3D. That's why MOPIC was born. "3D for everyone!"
